

## ICP Change Reference to Panel Change Reference Mapping

Below is a table showing the mapping of each ICP change reference number to each panel reference number.

Not all ICP changes have a CPW reference and not all CPW references have an ICP reference. The changes that have both reference numbers are the changes that were in-flight i.e. MOSL had published change proposals prior to April 1<sup>st</sup>, but had not yet been fully implemented by the go-live date.

Information for each of these change proposals can be found on the MOSL change page [here](#). Each proposal's current status can be tracked via the table on the MOSL change page or the Panel change proposal log.
