Change Proposal/ Charging Change Proposal Details

Description of (i) the issue or defect which this Change Proposal seeks to address, or (ii) the modified or new charging method or charging structure required pursuant to this Charging Change Proposal, as required under the Market Arrangements Code Section 6.2.1(b).

MPS 15 measures the time between a retailer cyclic meter read date, and the date the meter read (T105.R) was submitted.

The standard is measured at point of submission, meaning a meter read submitted late will only fail/be charged at the point the meter read is submitted. A non-submission of a meter read will therefore result in no MPS penalties. This creates a disincentive to submit late meter reads which, particularly give the focus on increasing the accuracy of settlement, is disincentivising behaviour in the most market interest.

It is also of note that the timely submission of meter reads is also measured under MPS 18 and 19, whereby failure to successfully submit a meter read by the expiring of the cyclic read SLA will result in automatic failure of the standard.

Description of the Change Proposal/ Charging Change Proposal, its nature and purpose and (for Change Proposals only) how it is consistent with the Principles and falls within the Objectives noted below, as required under the Market Arrangements Code Section 6.2.1(c).

The following proposal is made for Table 1 of CSD0002;

No	Context	Success criteria	Time Parameter 1 (Time Parameter in Code)		Time Parameter 2		Time Parameter 3	
MPS15	Late Meter Read submission	The T105.R (Submit Meter Read) is received by the Market Operator within five (5) BD of the Meter Read Date contained within the transaction in respect of a Regular Cyclic Read. This standard applies for all Meter Treatment types except Cross-Border Meters.	5 BD	Level 0 £0	Level 1 10 BD	£50	60 BD	Level 2 minus Level 1 £50

This change will remove charging for late meter read submissions, hence removing financial disincentives to submit late meter reads, but continue to allow visibility of meter read submission time performance.
